

3040 LEFT HAND RIBBON MOTOR

>>>IMPORTANT<<<

INSTALLATION INFORMATION

The length of the screws used to mount the ribbon motors is critical. If the mounting screws are too long they can penetrate the motor too far and **WILL DAMAGE THE NEW MOTOR, VOIDING THE WARRANTY.** It is extremely important that the motor be installed with all shims and washers as shown in the diagram included. Use the original **black** screws from the left hand motor. Note that these are slightly longer than the bronze screws used on the right hand motor. If you notice some resistance as you hand tighten the mounting screws **STOP IMMEDIATELY.. DO NOT TIGHTEN THE SCREWS!** Find and use shorter screws to install the motor. **If you encounter any problems please contact our support group at 714-251-9000 for assistance.**
